

# ALL-INCLUSIVE USER-FRIENDLY MULTI-APP MANAGEMENT PLATFORM

## Challenges

### How to easily migrate and manage your web applications on AWS cloud?

Our clients and partners are really keen to migrate to AWS cloud. However they're facing challenges to achieve that migration:

- Cloud can be quite complex
- DevOps are rare and expensive
- There's a lack of a comprehensive tool
- Migration costs are often way to big and frightening

In the meantime, Internet is more and more complex and demanding. Building the correct infrastructure requires multiple layers: Infrastructure, security, compliance, performance, reliability, traceability, maintainability and more...

## The ARTIFAKT Solution

### A BRIDGE BETWEEN DEVELOPERS' NEEDS AND BUSINESS STAKES

- Providing an all-in-one platform to help developers or DevOps, deploy, host, and manage web applications on ready-to-run, enterprise-grade cloud infrastructures;
- Giving autonomy and power back to web agencies and development teams for their projects;
- Getting the appropriate support & expertise with our dedicated cloud and application experts;
- Artifakt = Excellent performance, auto-scalability, security, reliability and visibility for agencies and small to large businesses.

## Benefits: Performance, Serenity and Confidence

The #1 Cloud Services assembled in an easy-to-use solution that will not let you down. You have full visibility on the health of your apps. Your development team has full control over your application.

#### A single point of truth for you

*With one click, you can have a look on all your deployed applications, your monitoring, your logs etc...*

#### A complete autonomy during the project

*All the features included in our console have been thought to ease the daily workload and reinforce the collaboration between your teams*

#### Deploy fast and stay online

*Less than 10 minutes to set up a proper platform on Enterprise-Grade Cloud infrastructure. Needs to upgrade your platform? In less time than it takes to tell!*

#### Handling all modern web applications

*We support modern e-commerce solutions and languages and keep adding new technology as the market evolves.*

## ARTIFAKT on AWS

Looking at the incredible catalog of services provided by AWS can be overwhelming for IT Departments or Agencies : where to start, what to choose, how to connect all these pieces together, how to scale, monitor, alert, secure...

Agencies and Businesses need a proper finished product to handle their application and hide this complexity without lowering their expectations. They want to be sure that all mandatory layers will be embedded and packaged for them.

That's what Artifakt has in store.. We have gathered the best AWS resources, and we've added world leading solutions such as Cloudflare or NewRelic to deliver the best possible platforms for business web applications.

### Features

#### Easy and Fast Deployment

Our experts designed the perfect blueprint for each web application we propose. Our platforms are Production ready, fine-tuned for every need (eCommerce, CMS, PIM...) and can be launched in a few minutes. Security and performance are built-in with AWS auto-scalability and Cloudflare Enterprise included (CDN/WAF/SSL and more).

#### Easy Control and Management

Once built, you can easily monitor your application, your performance and all your resources in a comprehensive, user-friendly interface. You can launch your marketing operations with no trouble, our AWS auto-scaling embedded feature will adapt your platforms to your needs automatically. If need be, you can also increase, decrease, duplicate or extend your resources with just a few clicks. Just focus on your business and sales, Artifakt runs your AWS resources accordingly!!

#### Easy Rights and Roles management

As a single point of truth, you can gather all your web applications and projects but also insure a better collaboration.

Thanks to our rights and roles feature, you can easily:

- Give partial or total access to your projects and resources management
- Set up a validation process for resources modification
- Track every action thanks to our built-in audit trails
- Deploy ssh access, manage access lists (allow/deny IP lists), open SFTP accounts and more.

### Case Study: International Cosmetic Brand eCommerce migration

#### Challenges

- Bad performance
- Lack of security
- Lack of visibility
- Hosting provider's SLA not respected
- No internal DevOps

#### Solution

The websites have been deployed and tested on AWS in a few days and the performance has drastically improved.

The team has been also properly trained to rapidly deploy new versions.

#### Results

- +30% traffic
- +60% performance
- 100% uptime in 18 months
- 6 campaigns and sales operations with no trouble
- Large increase (x3) of application updates
